

Day 1:

Question 2:

Tasks:

1. Identify the Issues with the Given Prompt

Given Prompt:

Write something about AI.

Issues:

The prompt is too short and unclear.

It does not explain what information is needed.

It does not mention who the content is for.

It does not tell the AI how long the answer should be.

Different people may get different answers because the prompt is very general.

2. Rewrite it as: - A clear instruction prompt - A role-based prompt

A clear instruction prompt:

Prompt:

Write a short paragraph (150–200 words) about Artificial Intelligence (AI). Explain what AI is, mention three common uses of AI, and describe two benefits. Use simple English.

A Role-Based Prompt:

Prompt:

You are a computer science teacher. Explain Artificial Intelligence (AI) to school students in simple language. Include what AI is, where it is used, and why it is useful.

3. Why Better Prompts Improve Output Quality

A good prompt gives clear instructions to the AI. It tells the AI exactly what to write, so the answer is more accurate and useful. Clear prompts also help the AI stay focused on the topic and reduce mistakes. As a result, the output is easier to understand and needs fewer changes.

4. Compare Vague vs Structured Prompts

Vague Prompt	Structured Prompt
Gives very little information.	Gives clear instructions.
The answer may be different each time.	The answer is more consistent.
Can be confusing for the AI.	Helps the AI understand the task clearly.
May miss important details.	Includes the required details.
Example: "Write something about AI."	Example: "Write a 150-word paragraph explaining AI, its uses, and benefits in simple English."
