

Day 3:

Question 2:

Tasks:

Task 1: Prompt Design

1. Create a well-structured prompt to generate student data.
2. Ensure the prompt includes the following constraints:
 - Data for exactly 5 students
3. Fields required:
 - name
 - age (must be between 18–25 only)
 - course
 - marks (must be between 0–100 only)
4. Output format must include:
 - JSON
 - Table

Prompt:

<system instruction>

You are a helpful AI assistant. Generate student data by following all given constraints. Make sure the data is accurate and follows the required format.

</system instruction>

<context>

Generate student information with the following rules:

- Data must contain exactly 5 students.
- Each student must have these fields:
 - name
 - age (must be between 18 and 25 only)
 - course
 - marks (must be between 0 and 100 only)

The final response must be provided in two formats:

1. JSON
2. Table

</context>

<query>

Create data for exactly 5 students with valid names, ages, courses, and marks. Ensure all constraints are followed.

</query>

<output>

The generated student data should be displayed in:

1. JSON format
2. Table format

</output>

Task 2: Model Execution

1. Use the same prompt on the following AI models:

ChatGPT

Google Gemini

2. Generate outputs from both models.

3. Paste both JSON and table outputs for comparison.

ChatGPT Output:

Json:

```
[
  {
    "name": "Aarav Sharma",
    "age": 19,
    "course": "Computer Science",
    "marks": 91
  },
  {
    "name": "Priya Nair",
    "age": 21,
    "course": "Electronics",
    "marks": 85
  },
  {
    "name": "Rahul Verma",
    "age": 22,
    "course": "Mechanical Engineering",
    "marks": 78
  },
  {
    "name": "Sneha Patel",
    "age": 20,
    "course": "Business Administration",
    "marks": 94
  },
  {
    "name": "Karthik Reddy",
    "age": 24,
    "course": "Information Technology",
    "marks": 88
  }
]
```

Table:

Name	Age	Course	Marks
------	-----	--------	-------

Aarav Sharma	19	Computer Science	91
Priya Nair	21	Electronics	85
Rahul Verma	22	Mechanical Engineering	78
Sneha Patel	20	Business Administration	94
Karthik Reddy	24	Information Technology	88

Claude Output:

Json:

```
[
  {
    "name": "Ananya Sharma",
    "age": 20,
    "course": "Computer Science",
    "marks": 88
  },
  {
    "name": "Rohan Verma",
    "age": 22,
    "course": "Mechanical Engineering",
    "marks": 74
  },
  {
    "name": "Priya Nair",
    "age": 19,
    "course": "Data Science",
    "marks": 92
  },
  {
    "name": "Karan Mehta",
    "age": 24,
    "course": "Business Administration",
    "marks": 65
  },
  {
    "name": "Sneha Iyer",
    "age": 21,
    "course": "Electronics Engineering",
    "marks": 79
  }
]
```

Table:

Name	Age	Course	Marks
Ananya Sharma	20	Computer Science	88
Rohan Verma	22	Mechanical Engineering	74
Priya Nair	19	Data Science	92
Karan Mehta	24	Business Administration	65
Sneha Iyer	21	Electronics Engineering	79

Task 3: Comparison & Analysis

- 1.Compare the outputs from both models based on:
- JSON correctness
 - Formatting accuracy
 - Ease of readability
- 2.Provide at least 4–5 comparison points highlighting differences and observations.

Comparison Point	OpenAI Output	Claude Output
JSON Correctness	JSON format is correct and properly written.	JSON format is also correct.
Formatting Accuracy	Data is arranged properly in JSON and table format.	Data is also arranged properly.
Ease of Readability	Easy to read because the data is clear, simple, and matches the original information.	Easy to read, but changed details may make it harder to compare with the original data.
